users**

Returning: 103 (4%) New: 2,255 (96%)

Avg Session Duration (All)

2m 39s

-11.7% vs last week

Avg Session Duration (Engaged)

8m 38s

2+ pageview sessions

Organic Bounce Rate

35.5%

+40.1% vs last week

Organic Bounce Rate (30-day)

35.5%

+35.0% vs last month

AI Analysis

Organic sessions increased by 8.1% from last week, but the growth rate is slower than the 77.5% month-over-month increase seen in total sessions, indicating a potential deceleration in organic traffic momentum. The bounce rate for organic sessions has increased to 35.52%, which is higher than the overall bounce rate of 50.39%, suggesting that organic traffic is more prone to high bounce intent.

Top Landing Pages by Organic Traffic

AI Analysis

The "Custom Mailer Boxes" product page has significantly increased its organic share, now accounting for 18.1% of total organic traffic, indicating a successful optimization effort. In contrast, the "Custom Carton

Boxes" page has lost organic share, now ranking 4th, suggesting a potential ranking drop. The top product pages are converting at a rate of 1.5% to 2.5%, which is within the expected range for e-commerce.

Top Product Pages — Organic Conversions

AI Analysis

The organic conversion rate has dropped by 36.8% week-over-week, indicating a significant decline in conversion performance. Quote requests are driving the most value, accounting for 62% of total organic conversions, suggesting that Arka's custom and bulk order process is a key conversion driver. The top converting product, Custom Mailer Boxes, has a view-to-order rate of 6.67%, indicating that it punches above its traffic weight.

Top Blog Posts by Organic Traffic

AI Analysis

The top blog post "Instagram Success" is driving 28.6% of all organic traffic to the blog, indicating a strong interest in social media marketing but its relevance to packaging is unclear. The remaining top posts are mostly informational and lack a clear connection to packaging, suggesting they may not be driving conversion-ready traffic. "Reduce Packaging Cost 2021" stands out with 3 organic sessions and 3 visitors, a notable increase in traffic that warrants further review.

Page-Level Traffic Changes WoW

Pages with Significant Traffic Drops (WoW)

AI Analysis

The homepage saw a significant 67% increase in sessions, indicating a substantial boost in traffic. This gain is likely driven by a successful marketing campaign or optimization effort. On the other hand, product pages like big-shipping-boxes and custom-gift-boxes experienced significant drops in traffic, with -40.4% and -32.3% changes respectively, which warrants immediate attention to identify the cause and mitigate the impact.

Collection Pages Performance

The Custom Ecommerce Packaging collection saw a significant 30% increase in organic sessions this week, which is a notable growth. On the other hand, Custom Boxes and Boxes By Sizes experienced organic drops of 13% and 15.4% respectively, with Custom Boxes also seeing a decline in organic share. Additionally, Custom Clothing Packaging and Custom Makeup Packaging saw organic drops of 42.9% and 100% respectively, indicating a severe decline.

Boxes by Size Pages

AI Analysis

The total sessions for the "Boxes by Size Pages" segment decreased by 15.1% this week compared to last week, with a total of 35.0 sessions this week. The organic sessions for this segment also decreased by 17.9%. Notably,

the "Custom Mailer Boxes Inside 150" page saw a significant decline of 50.0% in sessions, while the "14X14X14 Box" page experienced a 18.2% increase in sessions. Overall, the segment is declining.

Technical SEO Issues

A. 404 Errors

B. Core Web Vitals (PageSpeed Insights)

9 Needs Improvement, 1 No Data across 10 pages. Most common issue: CLS. Data mix: page-level and origin-level CrUX.

Page	LCP	CLS	INP	Status	Source
/products/custom-mailer-boxes	1,332 ms	0.190	172 ms	Needs Improvement	Page
/products/custom-carton-boxes	2,128 ms	0.190	196 ms	Needs Improvement	Origin
/collections/all	2,128 ms	0.190	196 ms	Needs Improvement	Origin
/	2,312 ms	0.210	165 ms	Needs Improvement	Page
/products/custom-shipping-boxes	2,128 ms	0.190	196 ms	Needs Improvement	Origin
/products/custom-poly-mailer	2,128 ms	0.190	196 ms	Needs Improvement	Origin
/products/custom-inserts	2,128 ms	0.190	196 ms	Needs Improvement	Origin
/account	2,128 ms	0.190	196 ms	Needs Improvement	Origin
/cart	2,128 ms	0.190	196 ms	Needs Improvement	Origin
/collections/custom-boxes	—	—	—	No Data	No Data

AI Analysis

The majority of 404 errors (15990) are coming from deleted or non-existent pages, indicating a tracking issue with the /pages/browser-support URL being reported as a broken external link. The large number of 404s suggests that Arka should review its URL structure and ensure that deleted pages are properly redirected. With Core Web Vitals enabled, the CLS metric is causing layout instability, particularly with 25.

Supporting Product / UX Insights

The following metrics are included for broader context. They are product and UX analytics, not primary SEO KPIs.

User Activity

Avg DAU This Week

1375

+11.6% vs last week

Total WAU This Week

11,002

+11.6% vs last week

AI Analysis

Daily Active Users (DAU) trended down significantly, with a 43% drop from 1882 to 1062 between April 2nd and April 5th. This indicates a potential issue with user engagement. The Weekly Active Users (WAU) also dropped from 9128 to 1620, suggesting a decline in overall user activity.

Referrers by Traffic

AI Analysis

Google organic traffic increased significantly, surpassing Facebook as the top non-direct channel. Instagram and Pinterest also showed notable growth, indicating a potential shift in channel mix. However, it's unclear if these channels are converting, as there's no clear indication of conversion rates from these referrers. Add tracking for conversion rates from Instagram and Pinterest to better understand their impact on the business.

E-Commerce Conversion Funnel

Note: Starting this week, "Product Viewed" counts all product detail page loads (/products/ pageviews) for more comprehensive coverage. Prior reports used a narrower custom event that undercounted product views, so view-based metrics are not directly comparable to earlier weeks.*

Per-Product Conversion Mailer Details

Product	Views	Add to Cart	View→Cart %	View→Order %	Orders
Custom Mailer Boxes	874	60	6.86	1.83	16
Custom Folding Cartons	395	17	4.3	0.25	1
Custom Shipping Boxes	310	26	8.39	1.61	5
Custom Poly Mailer	242	12	4.96	1.24	3
Custom Retail Boxes	83	22	26.51	0.0	0
Big Shipping Boxes	71	4	5.63	1.41	1
Custom Mailers with Inserts	66	19	28.79	0.0	0
Custom Tissue Paper	45	8	17.78	2.22	1
12x12x6 Standard Shipping Boxes	35	0	0.0	0.0	0
Blank Mailers	35	12	34.29	0.0	0
Blank Shippers	31	4	12.9	3.23	1
100% Compostable Garment Bags	30	2	6.67	0.0	0
Custom Apparel Boxes	29	4	13.79	0.0	0
100 Compostable Polymailer	29	4	13.79	0.0	0
Custom Stickers	28	6	21.43	3.57	1
100% Compostable Padded Bubble Mailers	23	8	34.78	13.04	3
Custom Gift Boxes	22	1	4.55	0.0	0
Custom Soap Boxes	21	0	0.0	0.0	0
Custom Shoe Boxes	21	1	4.76	0.0	0
100% Recycled Plastic Poly Mailers	20	7	35.0	5.0	1

... (showing first 50 of 199 rows)

AI Analysis

The biggest drop-off in the funnel occurs between the "add_to_cart" and "checkout_started" events, with a staggering 95.12% of users dropping off after adding products to their cart. This indicates a significant issue with the checkout process, where users are failing to initiate the checkout flow. The checkout-to-order rate is also concerning, with only 24.44% of users who started the checkout process ultimately completing an order.

Top Viewed Products

... (showing first 50 of 100 rows)

AI Analysis

Custom Mailer Boxes have significantly high views but are lagging in conversions, indicating that the product's high visibility is not translating into sales. This could be due to the product's high competition or lack of clear differentiation in the market. Adding more detailed product information, such as material options and custom sizes, to the product page may help improve conversions.

Popup Performance Metrics

Popup	Displays	Clicks	Dismissals	Click Rate %	Dismiss Rate %	Engagement %
Popup A	1367.0	30.0	945.0	2.19	69.13	71.32
Popup B	903.0	23.0	633.0	2.55	70.1	72.65

AI Analysis

Both popups have a click rate lower than their dismissal rate, indicating that they are net negative and potentially hurting the user experience. This suggests that the popups are being dismissed more often than they are clicked, which may be due to their content or placement. The engagement rate is also high, but it's more of a concern that users are dismissing the popups rather than engaging with them.

Daily Revenue

Total Revenue This Week

\$16,350

-55.9% vs last week

Avg Daily Revenue

\$2,044

-55.9% vs last week

AI Analysis

Revenue plummeted this week, down 55.9% from last week, indicating a significant drop in sales. This decline is likely due to the sharp drop in revenue on April 5th and 6th, where revenue was \$0, suggesting a tracking issue or a major business disruption. The revenue trend shape this week is erratic, with a large spike on April 3rd and a significant drop on the following days, which does not correlate with the steady increase in organic sessions and unique visitors.

Average Order Value

Avg Order Value (AOV)	Orders This Week	Total Revenue
\$480.90	34	\$16,350
-48.2% vs last week	-15.0% vs last week	this week

AI Analysis

The significant increase in Average Order Value from last week to this week is largely driven by a few large orders, as the order count has actually decreased. This suggests that the higher AOV may not be sustainable without a corresponding increase in order volume. To confirm, it's essential to review the order history and identify the specific large orders contributing to the increase.

Abandonment Rates

AI Analysis

Cart abandonment rate has decreased significantly from last week's 62.82% to this week's 9.38%, which is a substantial improvement and is now below the typical industry range of 25-35% for checkout abandonment. This indicates that the majority of users are completing the checkout process, suggesting a possible issue with the cart abandonment tracking. Since cart abandonment rate has decreased, it's likely that the original 62.

bing.com	474	0	0.00%
instagram.com	1275	0	0.00%
gemini.google.com	13	0	0.00%

AI Analysis

Direct traffic has the highest conversion rate at 0.47%, which is significantly higher than organic search traffic from Google, Bing, and other platforms. This suggests that direct traffic may be coming from existing customers or users who have previously interacted with Arka's website, resulting in a higher conversion rate. It's unclear if this is a tracking issue or a real pattern, but it's worth investigating the user behavior and demographics of direct traffic to understand this disparity.
