2+ pageview sessions

Organic Bounce Rate

25.8%

+6.5% vs last week

Organic Bounce Rate (30-day)

25.8%

+28.2% vs last month

AI Analysis

The organic growth rate has slowed down significantly compared to last week's 19.5% increase, and this week's 6.7% decrease in organic % of total sessions suggests that the traffic is becoming less targeted. The bounce rate has decreased by 14.7% from last week, which is a positive sign, but the organic bounce rate has only increased by 6.5% from last week, indicating that organic traffic might be less engaged. The average session duration has decreased by 30.

Top Landing Pages by Organic Traffic

AI Analysis

Custom mailer boxes have significantly increased their organic share, now accounting for 24.2% of total organic traffic, indicating a strong ranking performance. In contrast, custom carton boxes have lost share, now

ranking 7.9% of total organic traffic, suggesting a potential drop in search engine rankings. The top pages are converting well, with product pages driving a high percentage of organic visitors, but it's unclear if these visitors are converting into customers.

Top Product Pages — Organic Conversions

AI Analysis

The organic conversion rate has spiked significantly, increasing by 300% week-over-week, indicating a potential anomaly in the data. However, upon closer inspection, the conversion counts are implausibly low, with only 8 orders and 30 combined conversions in a week, suggesting a tracking issue. Despite this, quote requests drive the most value, accounting for a substantial portion of organic revenue.

Top Blog Posts by Organic Traffic

AI Analysis

The top blog post driving organic traffic is "Usps Says Delivered But No Package," which indicates that Arka is attracting users searching for solutions to specific packaging-related issues. However, the majority of the top blog posts are either general news or customer features, suggesting that Arka's blog is not effectively driving packaging-relevant traffic.

Page-Level Traffic Changes WoW

Pages with Significant Traffic Drops (WoW)

AI Analysis

The top traffic gain page, /pages/reusing-packaging-materials, is a blog page, indicating a successful content marketing effort. However, high-value product pages such as /products/custom-gift-boxes-outside and /products/custom-board-game-boxes are also experiencing significant gains, suggesting a potential increase in high-intent organic traffic.

Collection Pages Performance

AI Analysis

Custom Ecommerce Packaging collection is declining organically at a rate of 42.3%, which is a significant drop. Custom Boxes collection is also experiencing a decline, with a 7.1% decrease in organic sessions. Additionally, Custom Makeup Packaging and Custom Cannabis Packaging collections are experiencing explosive growth, with 300% and 42.9% increases, respectively, indicating a potential shift in organic share.

Boxes by Size Pages

AI Analysis

The total sessions for the "Boxes by Size Pages" segment have increased by 30.8% week-over-week, indicating an overall improvement in traffic. The 12X12X6 Box page showed a notable 30.8% increase in total sessions,

while the 4X4X4 Box page experienced a significant decline of 44.4%. The 20X20X20 Box and 22X22X22 Box pages both saw a 100% drop in sessions, suggesting potential tracking issues or content removal.

Technical SEO Issues

A. 404 Errors

B. Core Web Vitals (PageSpeed Insights)

1 Good, 9 Needs Improvement across 10 pages. Most common issue: CLS. Data mix: page-level and origin-level CrUX.

Page	LCP	CLS	INP	Status	Source
/products/custom-mailer-boxes	1,222 ms	0.170	147 ms	Needs Improvement	Page
/collections/custom-boxes	2,150 ms	0.180	209 ms	Needs Improvement	Origin
/products/custom-carton-boxes	2,150 ms	0.180	209 ms	Needs Improvement	Origin
/	2,201 ms	0.240	183 ms	Needs Improvement	Page
/products/custom-poly-mailer	2,150 ms	0.180	209 ms	Needs Improvement	Origin
/products/custom-shipping-boxes	2,150 ms	0.180	209 ms	Needs Improvement	Origin
/pages/contact-us	2,150 ms	0.180	209 ms	Needs Improvement	Origin
/pages/about	2,150 ms	0.180	209 ms	Needs Improvement	Origin
/pages/custom-order	2,150 ms	0.180	209 ms	Needs Improvement	Origin
/collections/all	2,086 ms	0.000	—	Good	Page

AI Analysis

The majority of 404 errors (2561 hits) are caused by a deleted external link to the browser-support page, indicating a technical issue with external linking. Core Web Vitals (CWV) show a widespread need for improvement, with CLS causing layout instability being the most prevalent issue, affecting 85% of pages at the origin level. To address this, adding a fixed layout to the header and footer sections of the website would help improve CLS scores.

Supporting Product / UX Insights

The following metrics are included for broader context. They are product and UX analytics, not primary SEO KPIs.

User Activity

Avg DAU This Week

1252

+29.5% vs last week

Total WAU This Week

10,018

+29.5% vs last week

AI Analysis

Daily active users (DAU) trended up this week, with a notable increase on March 19, suggesting strong user engagement. The weekly active users (WAU) count also rose significantly, from 3694 to 5372, indicating a substantial increase in overall user activity. This aligns with the overall upward trend in organic sessions and unique visitors, with a notable decrease in organic sessions as a percentage of total sessions.

Referrers by Traffic

AI Analysis

Google search traffic has increased significantly, surpassing Facebook as the second-largest referrer, indicating a shift in channel mix. Instagram traffic remains relatively stable, but its conversion rate is concerning, as it drives a substantial amount of traffic without converting visitors into customers.

E-Commerce Conversion Funnel

Per-Product Conversion Details

Product	Views	Add to Cart	View→Cart %	View→Order %	Orders
Custom Mailers with Inserts	69	5	7.25	0.0	0
100% Recycled Honeycomb Mailer / 200 units	8	0	0.0	0.0	0
Recycled Bubble Mailer / 200 units	6	0	0.0	0.0	0
Blank Shipper / 50 units	1	0	0.0	0.0	0
Blank Shipper / 250 units	1	0	0.0	0.0	0
100% Compostable Padded Bubble Mailer / 200 units	1	0	0.0	0.0	0
100% Recycled Honeycomb Mailer / 150 units	1	0	0.0	0.0	0

AI Analysis

The biggest drop-off in the funnel occurs at the checkout_started stage, where a significant 74.48% of users are dropping off. This indicates a major issue with the checkout process, likely due to a complex or time-consuming payment flow. To improve the funnel, it's essential to optimize the checkout experience and reduce friction.

Top Viewed Products

AI Analysis

The Custom Mailers with Inserts product has the highest views but relatively low conversion, indicating a potential issue with its conversion funnel. The product view data appears to be complete, with no missing or inconsistent entries. However, the low conversion rate suggests that the product may not be effectively communicating its value proposition to users. Adding more compelling product descriptions and images to this product page could help improve conversion rates.

Popup Performance Metrics

Popup	Displays	Clicks	Dismissals	Click Rate %	Dismiss Rate %	Engagement %
Popup A	1217.0	22.0	822.0	1.81	67.54	69.35
Popup B	1065.0	16.0	655.0	1.5	61.5	63.0

AI Analysis

The click rate for both popups is significantly lower than the dismissal rate, indicating that the popups are likely hurting the user experience. The engagement rate is high, but this is likely due to the high dismissal rate, not actual engagement. The high dismissal rate suggests that users are finding the popups intrusive or annoying. To improve, consider revising the popup content to make it more relevant and less dismissible.

Daily Revenue

Total Revenue This Week

\$24,320

+2318.2% vs last week

Avg Daily Revenue

\$3,040

+2318.2% vs last week

AI Analysis

The revenue trend this week shows a significant spike on March 16th, which is not correlated with any notable traffic patterns. The revenue on March 18th is \$0, indicating a tracking issue. The large increase in revenue on March 16th, from \$9.43 to \$11,371.93, suggests that a major order was fulfilled on this day. This discrepancy in revenue tracking warrants further investigation to identify the cause.

Average Order Value

AI Analysis

The average order value (AOV) has increased significantly from last week, indicating a potential shift in customer behavior. However, the relatively small order count this week, compared to last week, suggests that this increase may be driven by a few large orders rather than a sustainable change in customer spending habits.

Abandonment Rates

AI Analysis

Cart abandonment rate remains high at 65.71%, significantly above the industry average of 70%. Despite the notable increase in organic sessions and unique visitors, this rate has not improved, indicating a persistent issue with the checkout process. The large jump in total weekly revenue suggests that a small percentage of successful orders are generating significant revenue, but this is also likely masking underlying issues with the sales funnel.

Conversion Rate by Referrer

Referrer	Visitors	Converters	Conv. Rate %
\$direct	3953	20	0.51%
google.com	1881	3	0.16%
m.facebook.com	656	0	0.00%
instagram.com	390	0	0.00%
l.facebook.com	124	0	0.00%
bing.com	114	0	0.00%
instagram.com	95	0	0.00%
l.instagram.com	76	0	0.00%
chatgpt.com	72	0	0.00%
ww44.affinity.net	65	0	0.00%
reddit.com	62	0	0.00%
arka.com	59	0	0.00%
android-app://com.pinterest	48	0	0.00%
android-app://com.google.android.googlequicksearchbox	46	0	0.00%
pinterest.com	37	0	0.00%
android-app://m.facebook.com	34	0	0.00%
printful.com	30	0	0.00%
instagram.com	18	0	0.00%
gemini.google.com	18	0	0.00%
duckduckgo.com	16	0	0.00%

AI Analysis

Direct traffic has a significantly higher conversion rate compared to all other referrers, indicating a real pattern rather than a tracking issue. This suggests that users who directly visit Arka's website are more likely to convert, which may be due to their existing familiarity with the brand or a targeted marketing effort. To further investigate this, we should analyze the user behavior and demographics of direct traffic to identify potential opportunities for improvement.
